Distributed Cloud: Routed DDoS Executive Review

Observations & Highlights

Most Severely Targeted Tenant: The Technion (technion-awlqrnlk) was heavily targeted with multiple high-volume attacks, most notably on July 17, 2026, where they mitigated a massive 68.9 Gbps / 42.4 Mpps UDP and TCP SYN flood.

There were multiple alerts generated during that period, that were classified as false positives. F5 is constantly working to minimize that number.
